

Cable Storage Solution – Barge equipped with 5300t turntable

This cable storage solution has multiple advantages compared to typical onshore setups. Our barge and turntable solution is readily mobile and can be conveniently located along client's quayside, thereby removing onshore space requirements. The entire spread and stored cable can be shifted to more suitable locations for loadout to cable lay vessels that may be outside the depth or size limitations at the client quayside. We are also able to provide experienced cable handling crew and project management, as well as cable rollers, chutes and tensioners to suit any required deck configurations. The total cable weight capacity or volume can be increased with the addition of an Oceanteam Solutions 2000t turntable. The entire spread is fully mobilised and available for operations.

Specifications Blue Offshore 5300t turntable

Outer diameter	23m
Product capacity	5300t
Wall height	8m
E-stop time	< 5s
Basket carousel gross weight	615t

Features

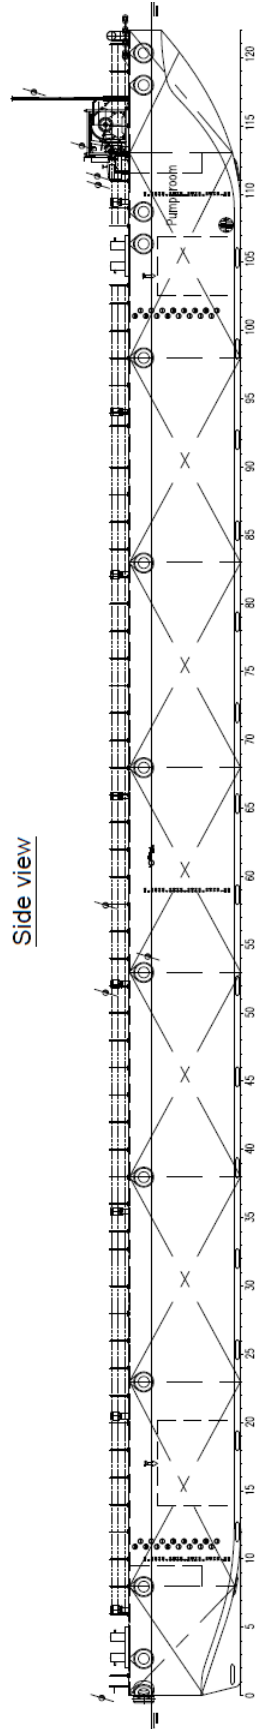

- 23m OD turntable basket Lloyd's certified for dynamic unrestricted use for 5300t / static use for 7000t
- Comes with loading tower that handles product weight up to 175kg/ m and product diameter up to 350mm
- Turntable basket is fully adjustable for: partition zones, inner hub diameter and inner hub/outer wall height
- Integrated E-stops between turntable, tensioners and other deck equipment
- Electrical-Hydraulically driven with inbuilt redundancy
- Tess Barge and seafastening certified for 6000t turntable in harbour conditions and can be adjusted for (un)restricted use
